

Complete renovation of the locker rooms and bathrooms for the needs of the Steel Shop production plant

[Skopje, 13.01.2021] - During the last year Makstil finished the investment project for the reconstruction of the changing rooms with modern amenities. This place will serve the employees working in the Steel Shop which is located in its vicinity. This investment is an integral part of the company's priorities to continuously improve the working conditions and is a proof of the commitment towards the well-being of its employees. The worth of the project is approximately 300,000 EUR,

Thanks to this, 690 square meters of space were able to be obtained, compared to the previous 300 square meters, while the capacity of the rooms is increased to 350 employees, or by 75% compared to the previous availability. The rooms for maintaining the personal hygiene of the employees is equipped with completely new toilets and showers, including a technical room as well as a first aid room.

Due to the current recommendations of the Commission for Infectious Diseases for taking preventive measures during the pandemic, unfortunately, we are currently not able to put the changing rooms into use. We hope that very soon the circumstances will change, the pandemic will be overcome and our employees will gain unrestricted access to these modern and adapted facilities.
